

Solution Sheet 2

Exercise 2

Specification of natural numbers

```
sort Nat;
```

```
  operations
```

```
    zero : -> Nat;
```

```
    succ : Nat -> Nat;
```

```
    add  : Nat x Nat -> Nat;
```

```
declare i, j : Z;
```

```
axioms
```

```
  add(zero,i) == i; /* A1*/
```

```
  add(succ(i),j) == succ(add(i,j)); /* A2 */
```

```
    i == add(i,zero); /* A3, proved in lecture */
```

Proof

Theorem

$$\text{add}(i, j) == \text{add}(j, i)$$

Proof

Induction start: $i == \text{zero}$

To demonstrate: $\text{add}(\text{zero}, j) == \text{add}(j, \text{zero})$

$$\text{add}(\text{zero}, j) == (\text{A1})$$

$$j == (\text{A3})$$

$$\text{add}(j, \text{zero})$$

Induction step:

Assumption: $\text{add}(i, j) == \text{add}(j, i)$

To demonstrate: $\text{add}(\text{succ}(i), j) == \text{add}(j, \text{succ}(i))$

$$\text{add}(\text{succ}(i), j) == (\text{A2})$$

$$\text{succ}(\text{add}(i, j)) == (\text{Assumption})$$

$$\text{succ}(\text{add}(j, i)) == (\text{A2})$$

$$\text{add}(\text{succ}(j), i) == (\text{A4, see below})$$

$$\text{add}(j, \text{succ}(i))$$

Auxiliary proposition A4

Theorem

$$\text{add}(\text{succ}(i), j) == \text{add}(i, \text{succ}(j))$$

Proof

Induction start: $i == \text{zero}$

To demonstrate: $\text{add}(\text{succ}(\text{zero}), j) == \text{add}(\text{zero}, \text{succ}(j))$

$$\text{add}(\text{succ}(\text{zero}), j) == \text{(A2)}$$

$$\text{succ}(\text{add}(\text{zero}, j)) == \text{(A1)}$$

$$\text{succ}(j) == \text{(A1)}$$

$$\text{add}(\text{zero}, \text{succ}(j))$$

Induction step:

Assumption: $\text{add}(\text{succ}(i), j) == \text{add}(i, \text{succ}(j))$

To demonstrate: $\text{add}(\text{succ}(\text{succ}(i)), j) == \text{add}(\text{succ}(i), \text{succ}(j))$

$$\text{add}(\text{succ}(\text{succ}(i)), j) == \text{(A2)}$$

$$\text{succ}(\text{add}(\text{succ}(i), j)) == \text{(Assumption)}$$

$$\text{succ}(\text{add}(i, \text{succ}(j))) == \text{(A2)}$$

$$\text{add}(\text{succ}(i), \text{succ}(j))$$

Exercise 3

Algebraic specification of queues

```
module Queue;  
  import Bool, true, false from Bool;  
  Nat, zero from Nat;  
  export all;  
  sort Queue;  
  operations  
    newqueue : -> Queue;  
    enqueue : Queue x Nat -> Queue;  
    isempty : Queue -> Bool;  
    dequeue : Queue -> Queue;  
    head : Queue -> Nat;  
    tail: Queue -> Nat;  
  declare q : Queue; n,m : Nat;  
  axioms  
    isempty(newqueue) == true;  
    isempty(enqueue(q,n)) == false;  
    dequeue(newqueue) == newqueue;  
    dequeue(enqueue(newqueue,n)) == newqueue;  
    dequeue(enqueue(enqueue(q,m),n)) == enqueue(dequeue(enqueue(q,m)),n);  
    tail(newqueue) == zero;  
    tail(enqueue(q,n)) == n;  
    head(newqueue) == zero;  
    head(enqueue(newqueue,n)) == n;  
    head(enqueue(enqueue(q,m),n)) == head(enqueue(q,m));  
end module Queue;
```
